

RAVINDER PANDEY

Full-Stack Engineer & Backend Architect

Node.js • TypeScript • Python • Django • FastAPI • React/Next.js • Multi-Tenant SaaS • AI Voice Systems

📍 Gurugram, Haryana | 📞 +91-9729041423 | ✉ pandeyravinder078@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Senior Full-Stack Engineer and Backend Architect with +3 years of experience delivering production-grade, multi-tenant SaaS platforms from inception to closure. Proven track record across AI voice pipelines (real-time STT → LLM → TTS), enterprise CRM systems, and OTT streaming platforms. Expert in Node.js/TypeScript, Python/Django/FastAPI, Prisma ORM, BullMQ/Redis-backed job queues, and Docker-based microservice deployments. Deep experience designing RBAC systems, multi-tenant data isolation, streaming sentence-queue pipelines, and safe zero-downtime schema migrations on shared production databases. Currently leading two independent SaaS products — AVA ONE Outbound (AI voice calling) and AVACRM (white-label enterprise CRM) — while managing concurrent client engagements at a software agency.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, SQL
Backend	Node.js, Express.js, NestJS, FastAPI, Django, Django REST Framework (DRF)
Frontend	React, Next.js 14, TanStack Query, Tailwind CSS
Databases	PostgreSQL (Supabase), MySQL, MongoDB, Redis (cache, queues, distributed locks)
ORM / Query	Prisma 7, raw SQL migrations (ALTER TABLE IF NOT EXISTS), query optimization
AI / Voice	Twilio (Voice + Recording), Deepgram Nova-2 (STT), Deepgram Aura (TTS), Google Gemini Flash (LLM), OpenAI Whisper
Queues / Real-time	BullMQ, Celery, RabbitMQ, Redis Streams, SSE (Server-Sent Events), WebSockets
DevOps	Docker, Docker Compose (5-service), Git/GitHub, Postman, CI/CD basics, Supabase (managed Postgres)
Security	JWT, OAuth2, RBAC (role hierarchy at middleware), SHA-256 API key hashing, AES/RSA concepts, OWASP top-10
Patterns	Multi-tenancy (orgId scoping), Sentence Queue (LLM/TTS decoupling), CQRS, Event-driven, Paginated APIs

PROFESSIONAL EXPERIENCE

Senior Full-Stack Engineer & Backend Architect | MatchBest Software Pvt. Ltd. Dec 2025 – Present

Gurugram, Haryana | Agency delivery across concurrent multi-client engagements

- ▶ Lead end-to-end delivery of client projects from architecture design through production deployment and closure, contributing as primary PR author across multi-tenant SaaS builds.
- ▶ Independently architected and built AVA ONE Outbound — a production-grade multi-tenant AI voice calling SaaS — with a 5-service Docker Compose backend, real-time call orchestration, and AI data extraction pipeline.
- ▶ Led AVACRM development as primary backend architect; built a fully white-label multi-tenant CRM targeting South Africa and Saudi Arabia markets with 5-role RBAC, multi-source lead ingestion, and multi-language voice campaign support.
- ▶ Conducted full technical audit and handover for AnimeKey.tv (NestJS + MongoDB Atlas + Next.js 14 + AWS ECS Fargate); produced structured reports for CTO-level review covering architecture gaps, monitoring gaps, and MongoDB region migration plan.
- ▶ Enforced safe schema migration strategy across shared production DBs: raw SQL via prisma.\$executeRawUnsafe with ALTER TABLE ADD COLUMN IF NOT EXISTS — never migrate dev or db push.

- ▶ Implemented Redis-backed BullMQ concurrency controls with proper finally-block lock release to prevent stale slot deadlocks in high-throughput call workers.
- ▶ Designed sentence-queue streaming pattern for real-time LLM→TTS decoupling — eliminating latency buildup in AI voice call pipelines.

Backend Developer (Python/Django & Node.js) | Venkware Infotech Solutions Pvt. Ltd. Mar 2023 – Nov 2025

Gurugram, Haryana

- ▶ Developed and maintained production-grade RESTful APIs using Django, DRF, and FastAPI — serving thousands of daily requests with high reliability.
- ▶ Designed and optimized PostgreSQL and MySQL schemas with proper indexing; improved query performance by 40%+ on high-traffic modules.
- ▶ Built backend systems for e-commerce platforms covering product management, cart logic, order workflows, and Razorpay payment gateway integration with webhook handling.
- ▶ Implemented JWT + OAuth2 authentication and role-based access control (RBAC) for multi-tenant applications.
- ▶ Configured Celery with Redis as message broker for async task processing — email dispatch, report generation, scheduled background jobs.
- ▶ Containerized applications with Docker; maintained consistent local/staging/production environment parity.
- ▶ Conducted code reviews, wrote unit tests, maintained 85%+ code coverage on critical backend modules.

KEY PROJECTS

AVA ONE Outbound — Multi-Tenant AI Voice Calling SaaS (Independent Product) *Stack: Node.js, TypeScript, Express, Prisma 7, BullMQ, Redis, Twilio, Deepgram Nova-2 (STT), Deepgram Aura (TTS), Google Gemini Flash, PostgreSQL/Supabase, Docker Compose, Next.js, TanStack Query*

- ▶ Architected and built a full multi-tenant outbound voice SaaS from scratch — 5-service Docker Compose backend (API, worker, scheduler, Redis, PostgreSQL), Figma-driven light-theme frontend with collapsible sidebar and SSE-powered Mission Control real-time dashboard.
- ▶ Implemented end-to-end AI call pipeline: Twilio call orchestration → Deepgram Nova-2 streaming STT → Gemini Flash LLM → sentence queue buffer → Deepgram Aura TTS → Twilio media stream playback. Achieved first successful 4+ minute call with clean goodbye detection and structured data extraction.
- ▶ Designed tenant sub-user RBAC with 5 roles (Owner / Admin / Manager / Agent / Viewer); built API key module with SHA-256 hashing; integrated call recording with auto-record and verbal disclosure compliance.
- ▶ Built Super Admin Command Center for cross-tenant management; implemented multi-schema multi-tenancy with orgId-scoped Prisma queries on every endpoint.
- ▶ Engineered Redis BullMQ worker concurrency controls with finally-block lock release — preventing stale-slot infinite loop crashes under production load.

AVACRM — Enterprise White-Label Multi-Tenant CRM (Lead Developer) *Stack: Node.js, TypeScript, Prisma, PostgreSQL, BullMQ, Redis, Meta Lead Ads, JustDial, Apollo, Webhooks*

- ▶ Led backend architecture for a fully white-label SaaS CRM targeting South Africa and Saudi Arabia; 5-role hierarchy (Super Admin / Admin / Manager / Team Leader / Sales Executive) with middleware-enforced RBAC.
- ▶ Built LeadStage enum migration, dedicated FollowUp table with full backfill, round-robin lead auto-assignment across all inbound sources (Meta, JustDial, Apollo, webhooks), and follow-up reminder cron system.
- ▶ Delivered unassigned lead pool endpoint, lead age tracking, role-scoped performance reports, and a six-phase HubSpot-level roadmap with unified contact timeline as the core differentiator.
- ▶ Enforced raw SQL migration discipline on shared test DB (43.205.217.221:5433) — zero-downtime schema changes at every sprint.
- ▶ Scoped multi-language voice campaign support: English, Zulu, Afrikaans, Arabic — integrated with AVA ONE voice bot infrastructure.

AnimeKey.tv — OTT Anime Streaming Platform (Technical Audit & Handover Lead) *Stack: NestJS, MongoDB Atlas, Next.js 14, Angular 17 CMS, AWS ECS Fargate, CloudFront, Redis, MediaConvert, GitLab CI/CD, Kotlin, SwiftUI*

- ▶ Led full technical handover and architecture audit for an anime OTT platform; reviewed NestJS backend, MongoDB Atlas cluster (planned Mumbai region migration), Next.js 14 frontend, Angular 17 CMS, Samsung/LG TV apps, and AWS infrastructure.
- ▶ Identified and documented critical issues: registration flow bugs, app crash vectors, missing monitoring/alerting, and absence of free vs. premium content flag system.

- ▶ Produced structured Word document deliverable for CTO-level review covering architecture gaps, remediation roadmap, and infrastructure migration plan.

Voxly — AI powered client updates platform (OSS) *Stack: FastAPI, PostgreSQL, Python, JWT, Redis, Next.js*

- ▶ Built a mentorship-matching platform with FastAPI, normalized PostgreSQL schema for users/sessions/messaging, JWT-based auth with mentor/mentee RBAC, and async-ready API endpoints.
- ▶ Documented all endpoints with OpenAPI/Swagger for clean frontend integration.

DivyaSangrah — E-Commerce Platform for Religious Products *Stack: Next.js, PostgreSQL, Express.js, Razorpay*

- ▶ Deployed full-featured e-commerce site managing 500+ SKUs with Razorpay payment gateway, webhook-based order status, and optimized MySQL queries — significantly reducing page load times.

EDUCATION

Bachelor of Computer Applications (BCA) — Gurugram University, Haryana | 2022

Availability: Immediate | Notice Period: 1 month
